Ontario Influenza Bulletin
2005-2006 Season

SURVEILLANCE WEEK 23 - 24 (June 4 – June 17), 2006

This issue of the Ontario Influenza Bulletin provides information on the surveillance period from June 4 – June 17, 2006 (weeks 23 and 24). The analysis for this issue occurred on Thursday June 22, 2006, therefore all data is current to that date.

During weeks 23 - 24 of 2006, influenza activity in Ontario was much lower compared to that of the previous two weeks. Only one sporadically occurring case of influenza A was reported through iPHIS. No institutional outbreak of influenza was reported from health units. The highest level of influenza activity in Ontario was 'sporadic activity' reported from Eastern, Central East, North East and Southwest regions. Toronto, North West and Central West region reported 'no activity' levels.

Please note: When entering sporadic influenza cases into iPHIS, under the "Aetiological agent" field, four options are available in iPHIS: "Influenza A", "Influenza B", "Influenza C" and "Influenza Virus" (no type). Please do not choose "Influenza Virus" from the pick list unless the type (i.e. A vs. B) is selected. For surveillance purposes, entering the type of influenza is essential. Your attention to this matter is greatly appreciated.

Also please note that the GIS map for influenza activity levels by health unit has been temporarily replaced by a table. We apologize for the inconvenience.

For a definition of influenza-like illness (ILI) activity levels and links to websites providing current influenza information from other sources, please refer to the attached Appendix. If you would like to provide feedback on the Bulletin, please contact Shafiq Chowdhury (shafiq.chowdhury@moh.gov.on.ca, 416-327-7807) or Anne-Luise Winter (anne-luise.winter@moh.gov.on.ca, 416-327-7301).

Table 1: Summary of laboratory-confirmed influenza cases and institutional influenza outbreaks by health region, June 4- 17 (Weeks 23 & 24), 2006.

Lab-confirmed Influenza cases*	HEALTH REGION							TOTAL

* Cumulative case counts include late reports and records that are otherwise reconciled. Therefore, cumulative counts may not equal new cases plus previous cumulative value.
† Confirmed cases of influenza can include laboratory-confirmed cases and epi-linked cases.
‡ Type of influenza, i.e. A vs B, was not specified in iPHIS (i.e. Influenza subtype dropdown menu left blank or reported as unspecified)

Ontario Influenza Bulletin, 2005-2006
Surveillance Weeks 23 & 24 (June 4 – 17), 2006
Influenza Subtype(s):

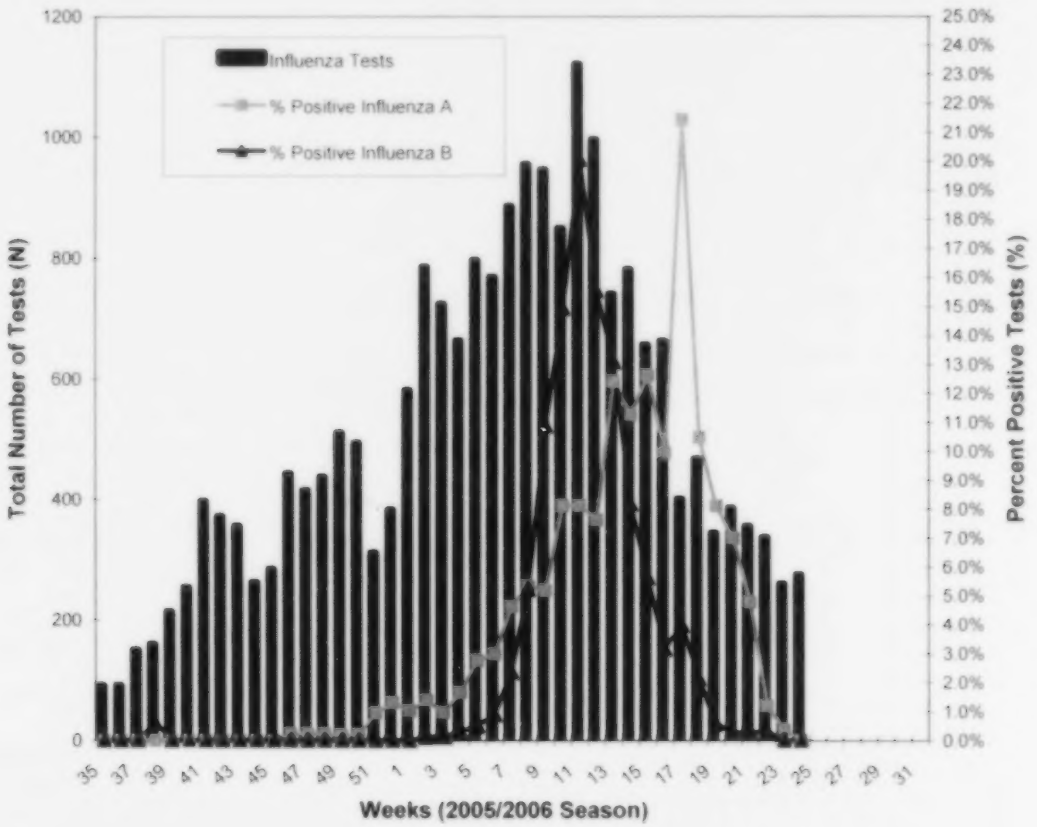
During weeks 23 and 24, 1,796 isolates were received by the Public Health Agency of Canada, with a total of 12 and 4 testing positive for influenza A and B respectively. The majority of the influenza A isolates (4) were from Quebec (33.3%), while Alberta, Saskatchewan and British Columbia each had 2 (16.7%) isolates. The majority of the influenza B isolates 3 (75%) were from Quebec.*

Since the start of the 2005-2006 influenza season, the National Microbiology Laboratory (NML) has antigenically characterized 972 influenza viruses. Since March 2006, all of the influenza B viruses characterized have been B/Malaysia/2506/2004-like (B/Victoria/02/1987 lineage), which is the recommended influenza B component for next season's vaccine. However, a B/Shanghai/361/2002-like virus, which is the B component for this season's vaccine, was detected in early June in Prince Edward Island.

Note: The 2005-2006 season Canadian vaccine contains an A/ New Caledonia/20/1999(H1N1)-like, an A/ California/ 7/2004(H3N2)-like, and a B/Shanghai/361/2002-like virus strain.

* These data have been obtained from the Respiratory Virus Detection tables of Public Health Agency of Canada for the weeks 23 & 24, 2006
** These data have been obtained from the FluWatch report of the Public Health Agency of Canada for weeks 21 & 22, 2006

Figure 1: Total number of influenza tests performed and percent of positive tests in Ontario reported to the Centre for Infectious Disease Prevention and Control (CIDPC), by report week*.



Source: Public Health Agency of Canada
* Total numbers reported include late reports; therefore totals may not be equal to the sum of the weekly numbers.

Note: Cumulative numbers for season to date are available through FluWatch: http://www.phac-aspc.gc.ca/fluwatch/

APPENDIX

Definitions for influenza activity levels:

No Data: No activity report corresponding to the surveillance week was received at the Ministry of Health and Long-Term Care Call Centre by the Tuesday (at 4 p.m.) following the end of the surveillance period.
No Activity = No ILI and no laboratory-confirmed cases* or outbreaks occurred.
Sporadic: sporadically occurring ILI **AND** laboratory-confirmed influenza* with NO outbreaks detected within the influenza surveillance region†
Localized: sporadically occurring ILI **AND** laboratory-confirmed influenza* together with outbreaks of ILI in schools and worksites or laboratory confirmed influenza in residential institutions occurring in less than 50% of the influenza surveillance region(s)
Widespread: sporadically occurring ILI **AND** laboratory-confirmed influenza* together with outbreaks of ILI in schools and worksites or laboratory-confirmed influenza in residential institutions occurring in greater than or equal to 50% of the influenza surveillance region(s)

* Confirmation of influenza within the surveillance region at any time within the prior four weeks
† Sub-regions within the province or territory as defined by the provincial/territorial epidemiologist

Influenza-Like Illness (ILI) Definitions:

A) ILI in the general population:

Acute onset of respiratory illness with fever and cough and with one or more of the following - sore throat, arthralgia, myalgia, or prostration which could be due to influenza virus. In children under 5, gastrointestinal symptoms may also be present. In patients under 5 or 65 and older, fever may not be prominent.

B) ILI/Influenza outbreaks:

Schools and work sites: greater than 10% absenteeism on any day most likely due to ILI.

Residential institutions: two or more cases of ILI within a seven-day period, including at least one laboratory-confirmed case.

Reporting Schedule for Influenza Activity Reports (Appendix C)

Week	From --- To	Submit to MOHLTC by
25 - 26	June 18, 2006 – July 1, 2006	Tuesday July 4, 2006
27 - 28	July 2, 2006 – July 15, 2006	Tuesday July 18, 2006
29 - 30	July 16, 2006 – July 29, 2006	Tuesday August 1, 2006
31 - 32	July 30, 2006 – August 12, 2006	Tuesday August 15, 2006
33 - 34	August 13, 2006 – August 26, 2006	Tuesday August 29, 2006

for the remaining 2005-2006 Season
